Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 13-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Ross et al. 6,610,770, with Bixler et al. 5,178,730 enclosed as evidence.
2. Ross et al. disclose a fire retardant polymer composition comprising smectite clay modified with one or more quaternary ammonium compounds, an organic material capable of intercalating the clay and a polymer, with the organic material being present in a concentration of 1-50 wt.% of the clay (claim 1). Although the organic material is described in the specification as optional, it is positively claimed, making it a required constituent. The clay and the organic material are present in a concentration of 1-40 wt% of the polymer (claim 2). The organic material is an organic acid (claim 3). The polymer can be polycarbonate (claim 4) and since it is part of a Markush group, it is individually claimed. The clay can be montmorillonite, bentonite or hectorite (claim 8 and column 6, lines 50-67). Dimethyl bis(hydrogenated tallow) ammonium chloride is described in column 8, lines 35-60. The organic acid can be citric acid (column 9, line 16). Ross et al. do not mention the particle size of the clay, however Bixler et al. in claim 2, teach the dimensions of hectorite, the clay used by Ross et al. (see claim 8), proving that the dimensions claimed by applicants are inherently possessed by the claimed nanoclay. The impact performance is inherent in the composition. The process

Art Unit: 1714

is nominal, comprising mixing the ingredients together only. Applicants' claims are not novel.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is (571) 272-1124. The examiner can normally be reached on 7:00 a.m.-5:30 p.m. Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
